Basic Concepts of Computing

- 1.1. Input, Processing and Output form the main components of the **Information processing cycle**. For each stage of the cycle, provide a hardware device associated with that cycle. [3]
- 1.2. A computer system requires memory to operate. Name two kinds of memory found in a computer system and explain the difference between them. [2]
- 1.3. Place the following systems in order of processing power. Start with the least powerful. Smartphone; Server; Laptop; Desktop computer; Tablet PC [5]
- 1.4. Give two ways in which you can reduce the impact of computers on the environment. [2]

Notes

1. All documents are Google Docs/Sheets, edit using those tools please
2. Everything is editable, please don't delete anything you're not sure of
3. Work is saved automatically as one enters data
4. Do not share any links with anyone to any folders or documents
5. Use commenting
6. Contact matt@techteachers.co.za if you need any assistance
